

# Exercise 5-5: Explore Other Tools

---

## Objective

Explore additional n8n tools beyond Calculator, Search, and HTTP Request by integrating and testing one of your choosing.

## Prerequisites

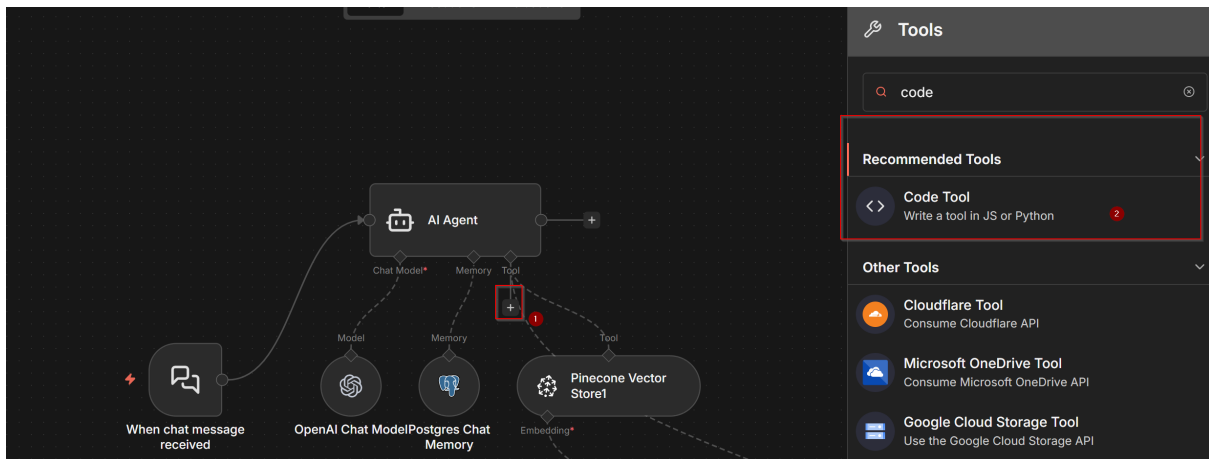

- **Exercise 5-1** completed (familiar with adding tools to the AI Agent)

## Available Tools to Explore

Choose **ONE** of the following tools to integrate and test:

- **Google Calendar:** Schedule reminders or appointments
- **Gmail:** Send email summaries or notifications
- **Slack:** Send messages to channels
- **Google Sheets:** Log conversation data
- **Any other n8n tool** that interests you

If you are concerned about logging into any accounts, there are offline tools that you can integrate and test with. For example, `Code Tool` is one the available options that you can work with.

## Your Task

### Setup

1. Add your chosen tool node to your workflow
2. Connect it to the **AI Agent** as a tool
3. Configure necessary credentials and settings
4. Write an appropriate **description** for the tool so the AI Agent knows when to use it

### Test

1. Create a prompt that would require using your chosen tool
2. Test if the agent successfully uses the tool
3. Verify the tool executed correctly (check calendar/email/sheet/etc.)

### Example Scenarios

- **Google Calendar:** “Create a reminder to review CAG annual report updates on March 15, 2026”
- **Gmail:** “Email me a summary of what we discussed about Changi’s digital services”
- **Google Sheets:** “Log this conversation in my Changi queries spreadsheet”

# What to Submit

A text document with:

1. **Tool chosen:** Which tool did you integrate?
2. **Configuration:** Brief description of how you set it up
3. **Test prompt:** What question/request did you use?
4. **Result:** Did it work? What happened? (Include evidence like screenshot, URL, or confirmation)
5. **Use case:** When would this tool integration be useful in a real Changi Airport Group Knowledge Bot?
